

FLORINAXIS

- Concentrated source of bioavailable carbon.
- May be used as a primary or supplementary source of carbon.
- Provides naturally-derived sources of humic substances.
- For the first 3-5 weeks of use, add 5mls per 190 litres once each week; increase dosage thereafter depending on perceived nutrient needs of plants.

CODE	SIZE	Ctn
FNA125	125ml	12
FNA250	250ml	12
FNA500	500ml	12

FLORIN-FE

- Provides both ferrous and ferric iron sources to maximise benefits to plant aquaria.
- Two tiered approach to iron supplementation consists of one ingredient to deliver immediate iron and another ingredient that slowly releases iron during the light cycle when the aquarium is illuminated.
- 1ml per 38 litres of aquarium water. Maintain the iron concentration with a range of 0.05-0.10ppm.

FNF250	250ml	12
FNF500	500ml	12

FLORINGRO

- Concentrated form of nitrogen, one of the most important plant nutrients.
- Nitrogen is present as nitrate, a form appropriate in aquaria (ammonium can revert to toxic ammonia in aquaria with pH over 7.0, urea is a source of ammonia)
- Contains Kelp extract, which provides natural phytohormones found to encourage growth and flowering.
- Add 5ml per 190 litres every other day or when required.

FNG250	250ml	12
FNG500	500ml	12

FLORIN-K

- Concentrated source of high-purity potassium required by plants
- Stronger than most competing products.
- Formulated utilising extensive research on aquatic plant nutrient requirements.
- Add 5ml per 190 litres every other day or when required.

FNK250	250ml	12
FNK500	500ml	12

FLORINMULTI

- Provides 14 elements critical to long-term health, growth and colouration of aquatic plants.
- May be used to establish beneficial water parameters in new aquaria.
- Replenishes depleted elemental concentrations in aquariums.
- Well suited to the planted aquarium hobbyist.
- Formulated utilising extensive research on aquatic plant nutrient requirements.
- Add 5ml per 190 litres every other day or when required.
