

## BRIGHTWELL MARINE ADDITIVES

**FERRION**

- Highly concentrated and stable iron solution.
- Supplements zooanthellate corals, clams, macroalgae, coralline algae, mangroves, marsh grasses and other marine algae and plants.
- Add 5 ml (1 capful) of product per 175 litres of aquarium water every other day or as needed to maintain the iron concentration within a range of 0.05 - 0.10 ppm.

CODE	SIZE	Ctn
FER250	250ml	12
FER500	500ml	12

**KORALLE-VM**

- Unique vitamin and minor and trace element complex for establishing and replacing substances important to marine invertebrates including corals and clams.
- Does not require refrigeration.
- Composed of purified water and ultra-high purity materials.
- Add 5mls per 75 litres of water in the aquarium system weekly for the first four weeks of use; then, gradually increase the dosage to 10 ml per 75 litres per week if desired.

KVM250	250ml	12
KVM500	500ml	12

**REPLENISH**

- Replaces trace and minor elements used by fishes, corals, and other invertebrates which are lost through chemical filtration.
- Provides 29 minor and trace minerals, all present in natural seawater.
- Composed of purified water and ultra-high purity materials.
- Add ½ ml (~10 drops) of product per 95 litres of aquarium water every other day.

REP125	125ml	12
REP250	250ml	12
REP500	500ml	12

**KORALCOLOR**

- Gives colouration to plants and animal cells.
- Provides trace quality elements.
- Does not influence population density of xanthophylls.
- Add 1ml to 95 litres every 3 days (alternatively, twice a week).
