

INCREMENTAL INTENSIVE RECIRCULATION SYSTEMS

GROW-OUT SYSTEM

Many components are incorporated into this system in order to produce a powerful complete recirculation system for virtually any fish species, freshwater or marine.

- Fluid Bed Biological Filters
- Carbon Dioxide Degassing Units
- Water Quality Monitoring and Alarm System
- Ozone and Oxygen Generation
- Foam Fractionation
- Ultraviolet Sterilisers
- Rotating Drum Filters and Particulate Filter Sumps
- Manageable sized 3,000L tanks with viewing windows
- Multiple Pump Arrangement
- Flat Floor Operation
- Automatic Water Top-up Systems
- Total Assembly, Instruction and Support

12 -16 Tank System, up to 40,000L Volume
2,400Kg Stock Load at any one time
> 3 Time Per Hour Water Turn Over Rates
